School-Age 2 AM Newsletter
Ms. Jacinta

From March Into April

During March our class was full of all things science. There were many days filled with the creation of and playing with Oobleck. We discovered what a non-Newtonian fluid was and how it reacted when we touched it. We discovered how several everyday objects are made. The process of making string, glass, shoes, and diamonds are a few of the things we learned about. We learned about Rube Goldberg creations and then made our own. Using trial and error the final combination was discovered.

In April we are going to take flight with the birds and planes that make the sky their home. Using Papier Mache and art supplies we will create bird masks inspired by our favorite birds. We'll learn about different characteristics of both birds and planes and how it affects their ability to fly.

Throughout the month we will work on our projects for Teacher Appreciation Week.

Family Connections

Wisconsin is starting to enter it's days of warmer weather. Time to get outside and discover what the snow has been covering during these long winter months. Have the insects come out of hiding, how about the frogs, or chipmunks? Can you find the prints of a rabbit or a deer? What birds do you see returning from migration? Walk along the paths of your local park, around one of our many ponds and lakes, or your neighborhood to see what you can find.

Important Reminders

If you are looking for care for your child for the summer stop by the office to get your summer contracts. Get them in ASAP!

Dates to Remember

April 15th and 18th—No School
